

The 2015 Antibiogram is based on data from the hospital's Phoenix lab system. A community-associated isolate is one collected from an outpatient site or the emergency room. The only isolates less than 10 reported in the community antibiogram were *Stenotrophomonas maltophilia*.

# CRMC 2015 Community Antibiogram

The 2015 Antibigram is based on data from CRMC’s Phoenix lab system. The only isolates less than 10 reported in the hospital antibiogram were Stenotrophomonas maltophilia and MSSA in hospital non-urine isolates. All other isolates are 10 or more. Hospital isolates are those collected anytime during the patient’s hospital stay. This would include observation patients in hospital beds as well as all inpatients.

\*CRMC has Zinacef (cefuroxime) as our 2<sup>nd</sup> generation cephalosporin. Cost is \$11 per day. The cost is CRMC’s cost.
